

ABSTRACT

A tandem CD player for playing a selected track from two different CDs is disclosed. The tandem CD player comprises a control unit, a control panel that is connected to said control unit, and two CD players. The control panel has a plurality of controls for adjusting the control unit, including a fader control for adjusting a time period between songs played on alternating CD players. The control unit is connected to the two CD players for controlling their operations. The tandem CD player may also comprise a mixer unit that controls the sound output from the tandem CD player.
